## **DETAILED ACTION**

### *Election/Restrictions*

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not linked as to form a single inventive concept under PCT Rule 13.1.

The species are as follow:

- I) Species A of figure 1;
- II) Species B of figures 2-7;
- III) Species C of figures 8-9;

The species listed above do not relate to a single general inventive concept under PCT rule 13.1 because, under PCT rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species A and B are distinct because the internal structures of the motors are different. Species B also has end caps (elements 62 and 63), which are not in species A. Species A and B are different from species C wherein species C has cooling channels embedded in the motor structure.

2. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 2834

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
